FACE CARD

The Face Of Future Payments.

INTRODUCTION

The demand for faster, safer, and more convenient payment methods continue to grow. Traditional payment methods such as cards are vulnerable to loss and theft. Having to bring your wallet for cash and cards for your purchases is such a hassle. So why not make it convenient with bringing nothing but just your face.

Our Face Card(FC) is the future of Payments.

HOW DO YOU THINK A CONTACTLESS CARD WORK?

The Face Card machine is a contactless payment system that removes the need for physical cards. Users authenticate their identity by scanning their face, with fingerprint verification available as a backup if needed. After successful authentication, they simply select their bank, and the payment is processed quickly, securely, and conveniently.

DESIGN

Camera + Iris Scanner

21.5-inch LCD

Auto-adjusting mount

Fingerprint scanner

Receipt printer

FEATURES

Face ID Accuracy

- 3D Infrared Facial Recognition – Creates a detailed map of the face and works well in different lightnings.

- Iris Recognition Scanner – Captures the unique patterns in the user's iris and can verify identity within seconds upon scan.

- Liveness AI Detection – Ensures the scanner is looking at a real, live person and prevents spoofing using photos, videos, or masks.

Has a total of 99.65% Accuracy

FEATURES

Authentication Rules 

If the facial confidence is below 90% the system considers the the identity match uncertain and will require the user to verify their identity using the finger print scan. This approach will ensure the safety and accuracy for both the system and the user.

Capacitive Fingerprint Scanner is 99.99% accurate.

HOW MANY TIMES YOU CAN USE A CONTACTLESS CARD OR APP PAYMENT IN A DAY?

You may utilize contactless card or app payment as long as your funds can accomodate your purchases.
